***Election/Restrictions***

**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 16-26, drawn to methods of diagnosis of Parkinson's disease by differential expression of one or more genes.

Group 2, claim(s) 27-28, drawn to methods of screening an agent useful in screening agents for treating Parkinson's disease.

2. The inventions listed as Groups 1 and 2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Galter (Neurobiology of Disease (2003) volume 14, pages 637-647) teach ALDH1A1 expression is decreased in Parkinson disease. The invention of group 1 thus lacks a special technical feature over the prior art and thus lacks unity of invention.

**Further Restriction**

3. Additionally, groups 1 and 2 named above is subject to further restriction.

Applicant must further select a specific gene or combination of genes.

Applicant must further elect a specific gene or combination of genes for group 1 and group 2. The nucleic acid sequences of are directed to different genes and sequences within a gene and thus have no significant structural element that can

Art Unit: 1634

be readily ascertained and thus no special technical feature can be determined. Lack of unity exists between all of the various combinations as each gene lacks a common structural element as they have different sequences. The combination of genes do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the description fails to disclose that all of the genes share a common structure or function.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
